

Data Collection Terminal for Shop Floor

ADDO F2008 E-Mail Communication

Universal Information Terminal

E-Mail Communication upon Alarm and Production Completion by Patrol Light Signal in an Unmanned Operation.

- One F2008 can receive up to 8 signals.
(To receive 2 signals such as Alarm and Production Completion from one Machine, you can connect 4 Machines to one F2008.)
- F2008 requires Internet environment in the Shop Floor.
(System matching is needed as F2008 cannot send E-Mail depending on mail communication system.)

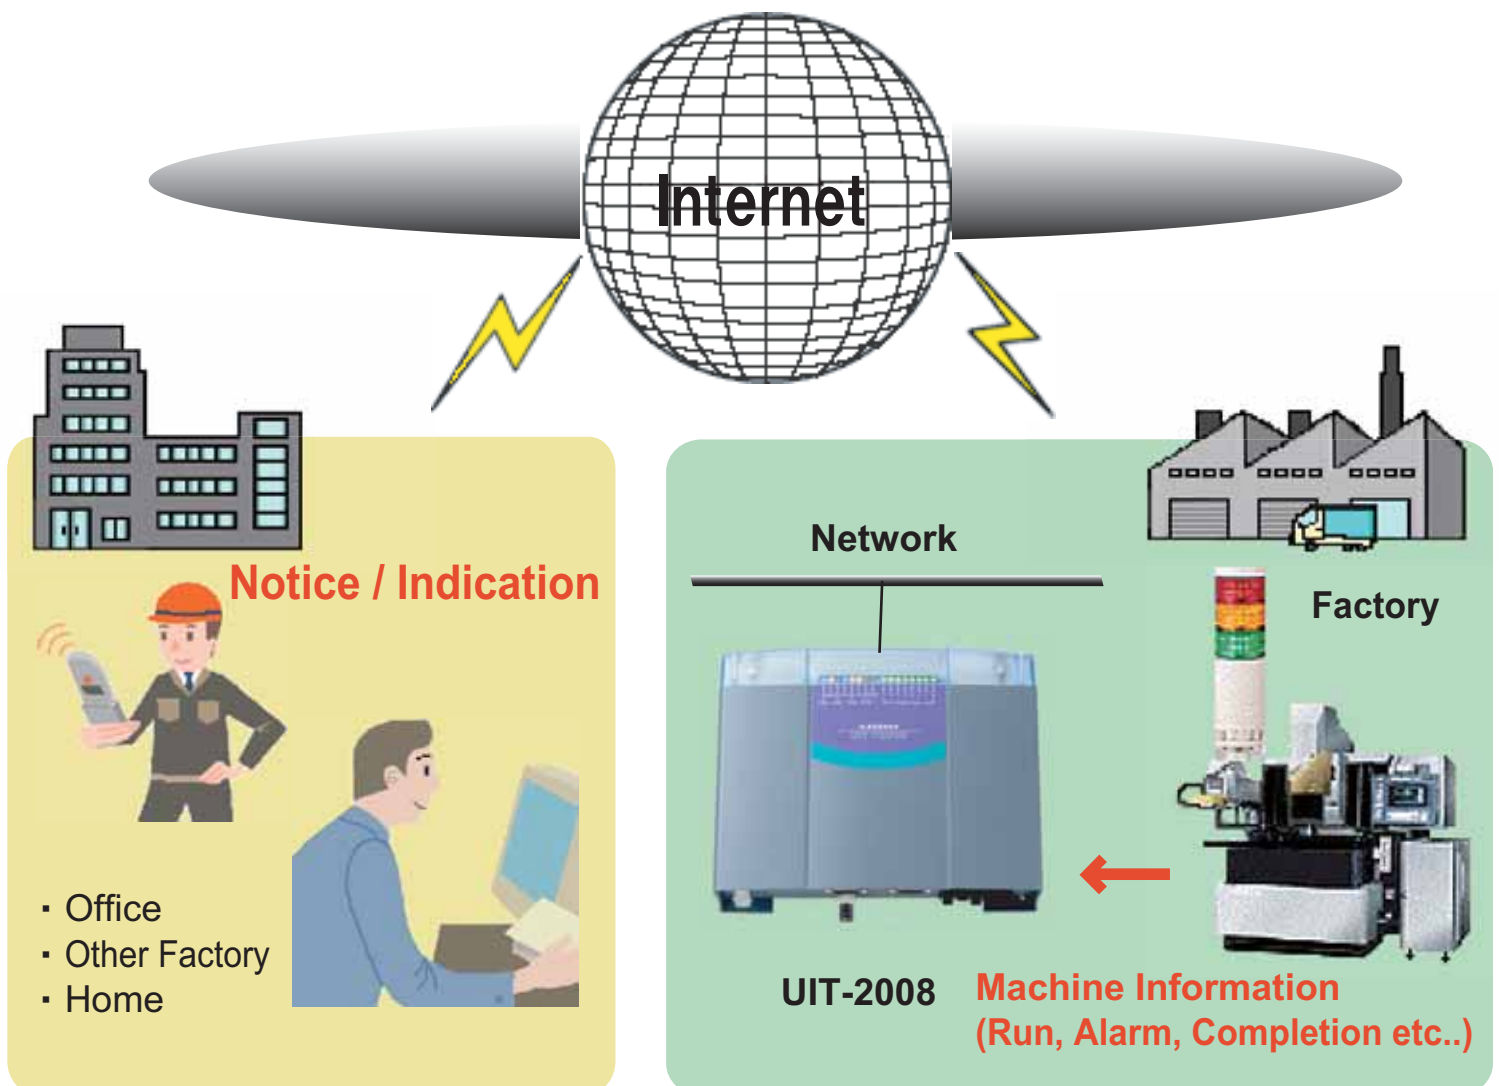

Increase Efficiency by Remote Monitoring of Equipments.

You have the following situation

1. Long production time with often an unmanned production in evenings.
2. Operator must be in office as the person responsible for this operation has other responsibilities.
3. Operator must to act immediately to reduce machine down time but cannot be in factory during production time.

..... etc The person who is out of shop floor.

With F2008, operator can act immediately to reduce machine down time, because he gets an automatic E-Mail after alarm and when production is completed.
