

Increase in business efficiency by collecting production information automatically and view activity in real time.

This customer does not have an automatic data collection system and he has no idea about its production volume. A person from the administration dept has to visit the factory daily to confirm production information such as volume. Whenever customers asked for urgent delivery, he will take a long time (visiting factory, checking production volume, manual calculations) in order to plan out a proper delivery schedule. Since installing the new system, the time spent by the administration dept in the factory has greatly reduced. This customer plans to install more of this new monitoring system since it can collect data in real time and record all events in a database.

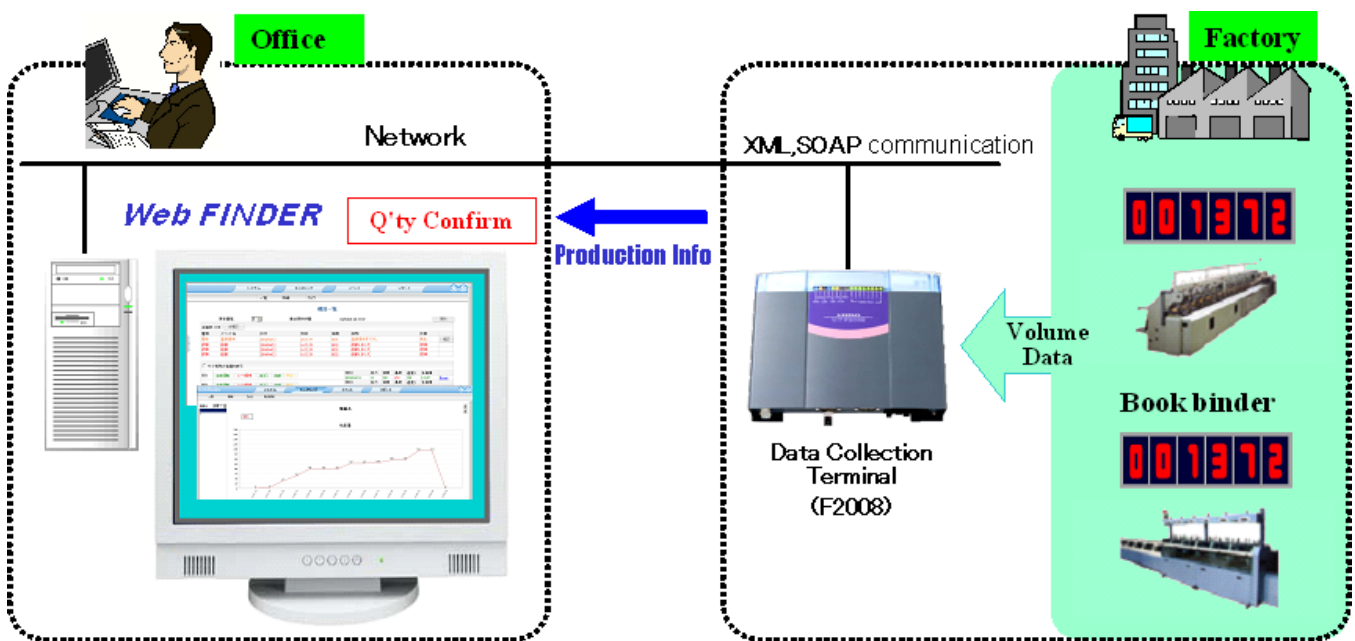

<Factory Manager>

“We have been spending much unnecessary time in the factory unable to collect real time production data. The administrator’s time has been reduced after having installed the new system. We need more of this new production monitoring system to automatically collect real time data to be installed as

System Outline:

Increase in business efficiency by collecting Bookbinding Q ' ty automatically.

- ① Daily Report Management

Production volume of each Bookbinding machine recorded in real time. Production volume and other information created in a Database.
