

Improving factory operations by switching from manual daily reporting to intensify use of automatic data collection system.

By using the “WebFINDER Lite” a software product, this customer has changed from a manual daily reporting system to an automatic daily reporting system. The new system saves the customer substantial time for manual reporting and are able to collect more accurate data. All these data collected from the various production facilities are used to help create a more accurate schedule control, production forecast, performance control, equipment utilization control etc. WebFINDER Lite creates data collected in accordance to the industrial standard CSV file format which can be integrated and used by the customer existing production Control System.

<Person who is in charge of production control section>

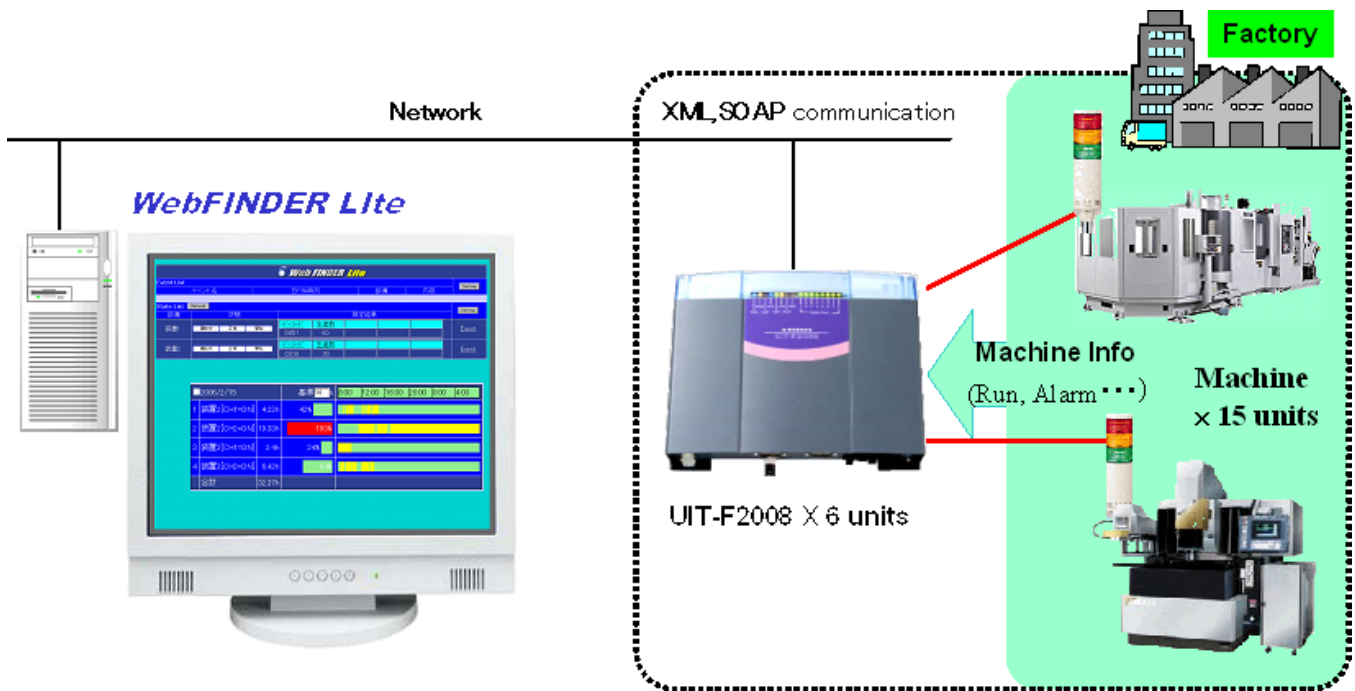

In the manual system, there was no proper control system and we take a long time to obtain information.. With the new system, we are able to make management report automatically in Excel file format from the data collected. We plan to use it with our existing system asap.

<Person who is in charge of manufacturing>

All the necessary data for daily report is now readily accessible using the new system. Even in the office, we are able to track and view the manufacturing process.

System Outline:

Increase efficiency to make daily reporting using automatic data collection from equipment in the factory.

- ① Management of Daily Report.
- ② Others

- Daily, Weekly or Monthly Total Production Report.
- Performance/Downtime Management Graph Report in CSV File.
- Real Time Machine Information as Benchmark for Improvements.
