

Various Features of WebFINDER

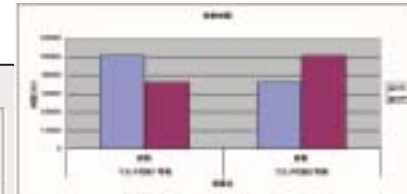

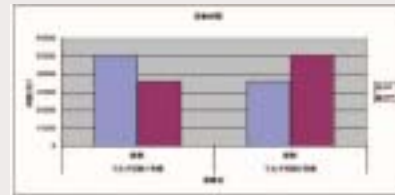

● Reporting :

Various information of equipment (On-Off Signal, Operation Time, Measurement Data etc...) are stored in the Database of the Server. Trend Graph, Daily Report, Monthly Report etc... are created from the stored data.

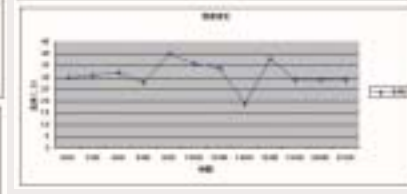

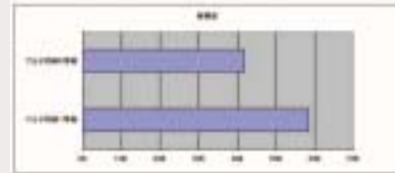

開始日時	2004-08-28
終了日時	2004-08-30
Total of Channels	200
Total Analog Channels	200
Total Event Items	000

項目	平均	最大	最小	標準偏差
電圧	1.50	1.50	1.50	0.00
電流	1.50	1.50	1.50	0.00
温度	1.50	1.50	1.50	0.00

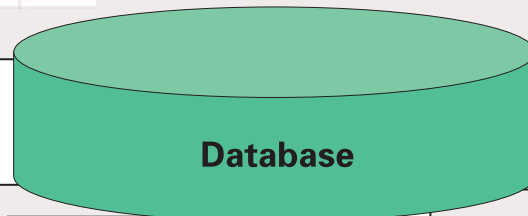

Operational Information of equipment

Change of Temperature

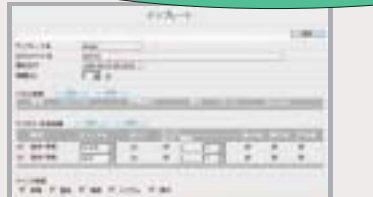

Operation Rate Graph of equipment

● Monitoring :

Easy to monitor various figures, real time Information of picture data, various data in the database.

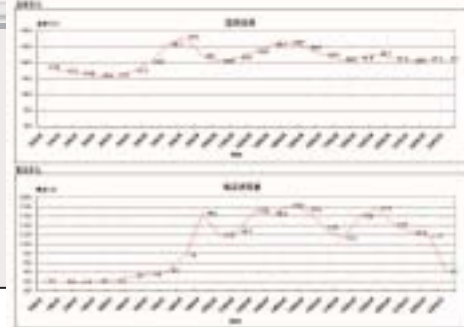

● E-Mail Transmission:

Internet mail or mobile telephone mail send to target address is available whenever Event trigger Signal has occurred.

Information

項目	平均	最大	最小	標準偏差
電圧	1.50	1.50	1.50	0.00
電流	1.50	1.50	1.50	0.00
温度	1.50	1.50	1.50	0.00

Trend Graph of Temperature and Value of Current

* There is an option for a simpler application software WebFINDER Lite for customers who do not require Data Base. All Data collected are stored as file in CSV format. WebFINDER Lite is able to support up to 5 units of UIT F2008.

* This specification is subjected to change without prior notice.

Remote Data Collecting and Monitoring System

ADDO WebFINDER

Suitable for a Variety of Different Applications

ADDO-Japan Corporation

ADD0 WebFINDER is an application software for ADD0 F2008 Universal Information Terminal for the purpose of Data Collection and Storage. Real Time Data Monitoring and Daily / Weekly / Monthly / Yearly Report can be easily created.

Suitable for Various Business Applications

Temperature Management

Monitoring the Green House

Central management is available in a wide area or a variety of Green Houses. Plants or Vegetables can be monitored by Camera and Notified by e-mails. It is good for Horticultural Farming.

Water Volume and Temperature Management at Swimming Pool and Hot Spring

Monitoring for Water Volume of Filtration System

Water Volume of Customers who are scattered in the different places can be easily monitored and the condition of Filtration System are available to management.

Monitoring of Power Consumption

Monitoring for Office Building or Factory

Power Saving and Eco Friendly can be realized with monitoring management for its maximum and accumulated values of the Power Consumption of the whole building. This can also be useful for Environmental Problems.

Management of Solvent and Drainage

Monitoring for Temperature condition of Recycling Solvent and Volume of Collected Drainage

The improvement of Painting Accuracy can be enhanced by temperature control of paints which is very much related to the bad quality of painting. And also different Painting Process can be managed by measuring weight of drainage.

Monitoring for Operation

Monitoring of Equipments and Machines

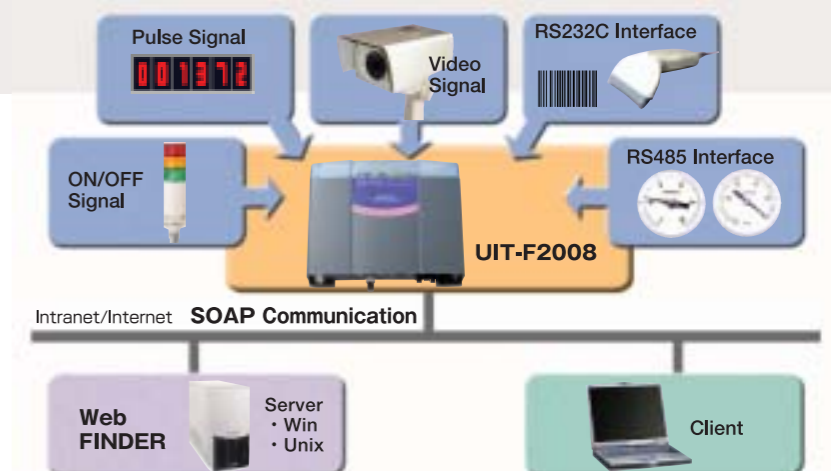

You can get real-time information which you require such as Operational Record, Event Information with Video Picture wherever you are.

Bookbinding

Data Collection of Number of Bookbinding and Temperature of Glue

You can find reason of differences between each production lot and each processing time by controlling progress of Bookbinding. And also failure rate is decreased by Temperature Control for Glue of Bookbinding.

Connection Image

- This product is a Web enable application to allow the sharing of existing information located in the design department and other department.
- It is flexible and quick in exchanging data among various systems inside and outside the enterprise to improve user productivity and NC machine tools efficiency while reducing cost thus increasing profits.
- Situation and condition of overseas factories or factories located far way from head office can be grasped.
- WebFINDER supports decision of intention which is related with ERP, CRM and SCM.
